

Early Intervention Screening

- ❧ It is a system of services that helps babies and toddlers with developmental delays or disabilities. Early intervention focuses on helping eligible babies and toddlers learn the basic and brand-new skills that typically develop during the first three years of life, such as:
 - ❧ Physical (reaching, rolling, crawling, and walking); cognitive (thinking, learning, solving problems); communication (talking, listening, understanding); social/emotional (playing, feeling secure and happy); and self-help (eating, dressing).
- ❧ During these vital years of life our trained Pediatricians will screen your child yearly. If you're concerned about your child's development, you may contact your UHS physician and ask to have your child evaluated immediately.
